Step 1

General Information

Let's get started by creating a basic description of your project. Everything you define here can be changed until your project goes live.

Project Name

This will be used to identify your project across the site.

Sample Name

Introduction

This will often be shown when a link on the site points to your project.

Write something...

Project Description

Tell people why they should help with your project.

Write something...

Step 2

Science Case

Tell people how the data you collect will be used. What is the expected output of this project?

Your Science Case

Tell people how the data you collect will be used. What is the expected output of this project?

Step 3

Prepare Subjects

Now you'll be able to choose the images you want volunteers to look at (JPEG, PNG, or GIF, please). Optionally, you can include metadata about the images with a manifest file.

Step 4

Workflow BLDR

Now you'll define and link together the tasks each volunteer will do to complete a classification.

Which task do you want to add to your project?

Marking

Marking tasks use highlighting tools to point out an object in an image.

Transcription

Highlight groups of written text to be typed out manually.

Camera Survey

Tools to identify objects within a photo via a wizard-like system.

Question

Simple text questions about what is present in the data.
